CONTROL AND INDICATORS

Note on counter's preciseness

The linear tape counter used with this unit is not a clock, and there is a certain error between the displayed time and real recording time (this is unavoidable because this unit has been designed to be capable of displaying tape time also during fast forward and rewind operations as well as during recording and playback). The degree of this error is dependent on the type of tape.

BLOCK LEVEL DIAGRAM

* Take out the case in advance.

1. Remove the five screws **1**.
2. Undo the three catches **2**, and detach the front panel.

3. Remove the three knobs and two nuts **3**.
4. Remove the two screws **4**.
5. Cut the two convexas **5**.
6. Disconnect the eight connectors **6**.
7. Unground **7**.
8. Undo the two catches at the both sides, and detach the sub panel **8**.

9. Remove the two screws **9**, and detach the shield plate.
10. Remove the three screws **10**.
11. Undo the four catches **11**, and disconnect the board.

KX-4520

DISASSEMBLY FOR REPAIR

12. Press the eject button to open the cassette holder ⑫.
13. Set aside the eject lever to the left side ⑬.
(When detaching, draw it out in the upper left direction.)
14. Remove the four screws ⑭, and take out the mechanism.

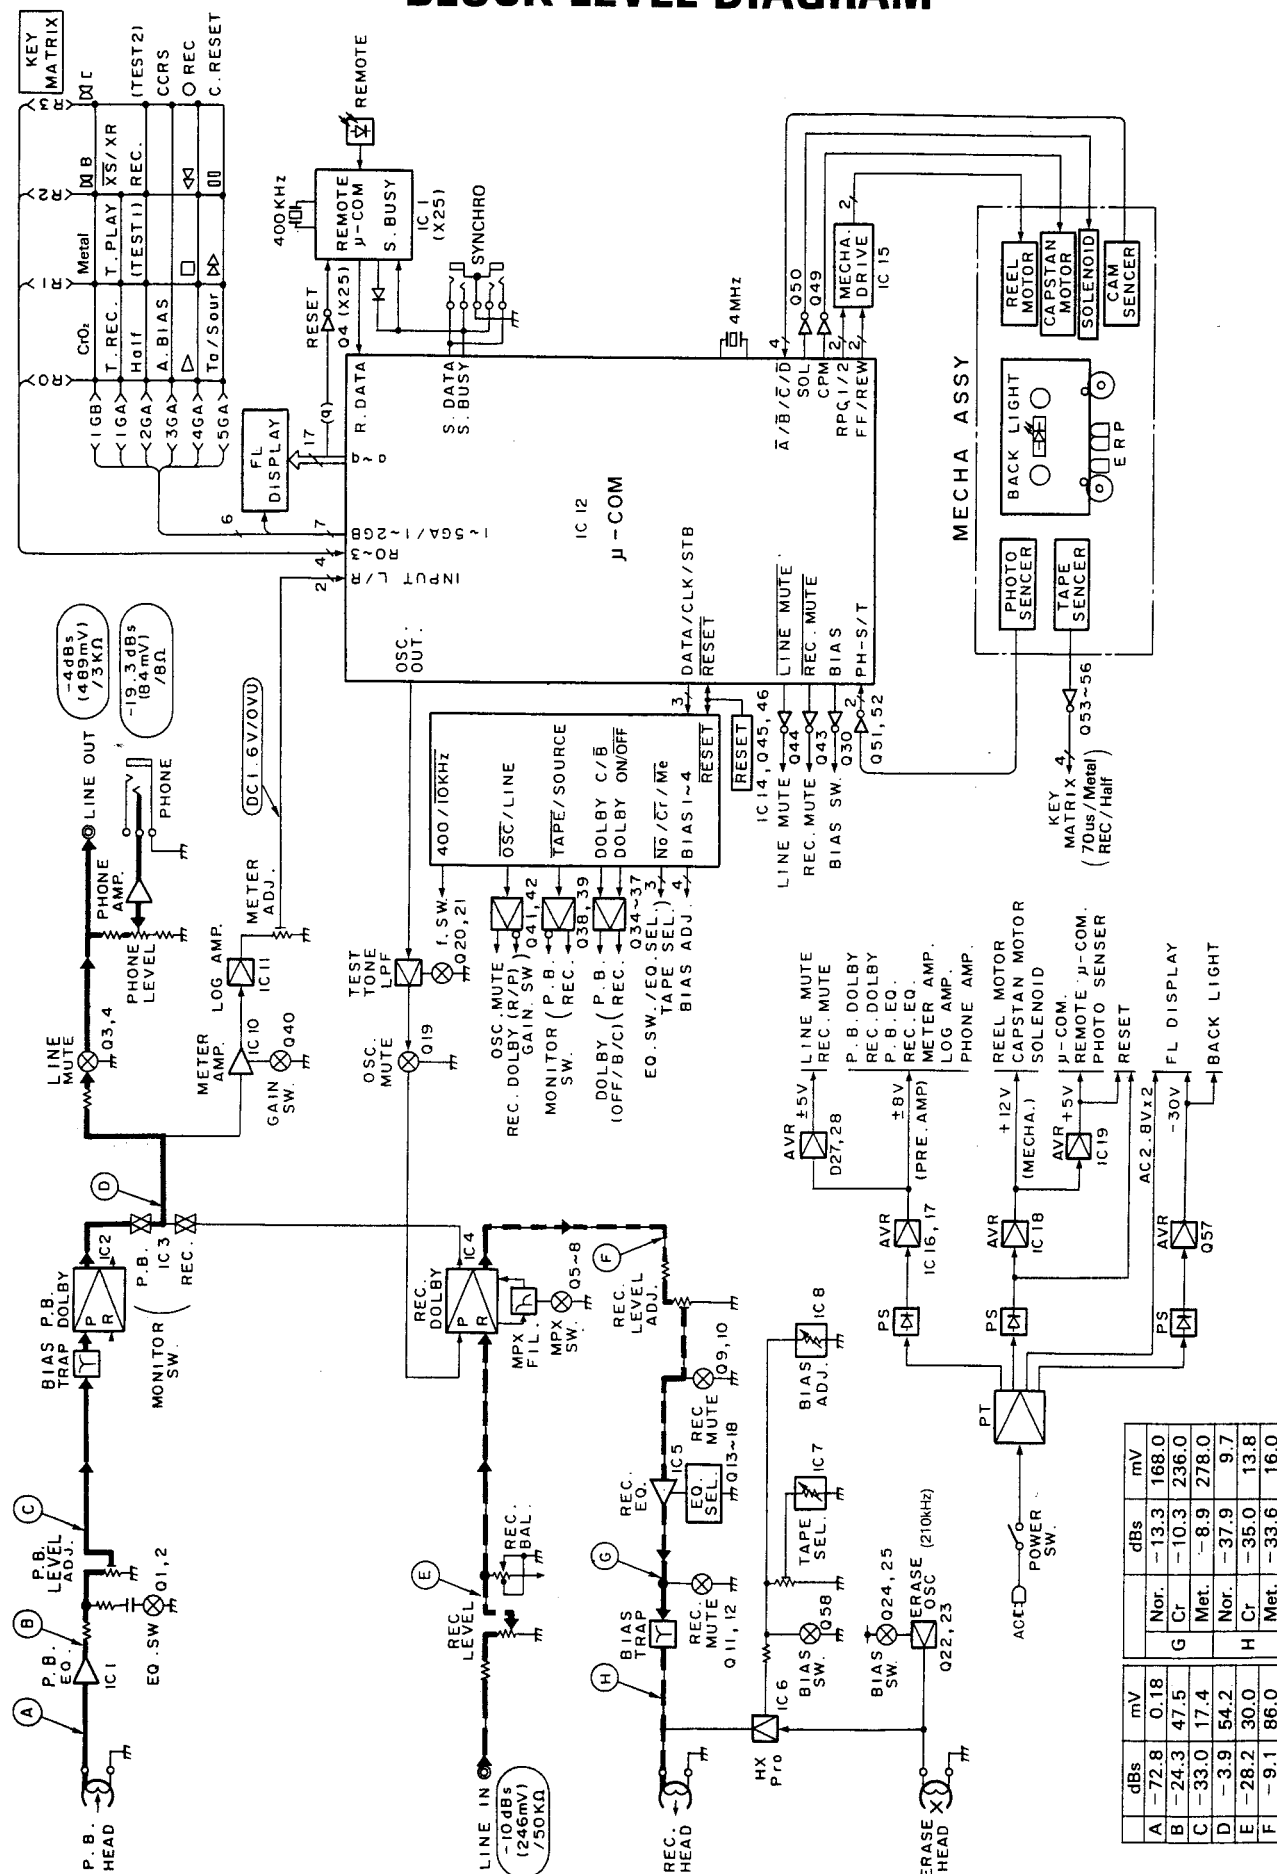

15. Disconnect the board (X26) (B/2) ⑮.
16. Remove the seven screws ⑯.
17. Disconnect the connector ⑰.
18. Draw up the board together with the rear panel rearwards.

19. When detaching the knob of the power switch, open slightly the portion indicated by arrows using a lead punch, etc.

Display unit (X25-3770-00)

Component(s)	Name	Use/function	Operation/condition/compatibility
Q1	2SC1740S (Q, R) 2SC945 (A) (Q, P)	Current buffer for 1GA	Compatible if V_{cbo} is more than 50 V and I_{cmax} is more than 100 mA.
Q2	2SC1740S (Q, R) 2SC945 (A) (Q, P)	Current buffer for 1GB	Compatible if V_{cbo} is more than 50 V and I_{cmax} more than 100 mA.
Q3	2SC1740S (Q, R) 2SC945 (A) (Q, P)	Current buffer for 2GB	Compatible if V_{cbo} is more than 50 V and I_{cmax} more than 100 mA.
Q4	2SC1740S (Q, R) 2SC945 (A) (Q, P)		At POWER ON, the port q of IC12 (X26-1240-00 A/21) becomes "H" from "L" and the output of Q4 becomes "L" from "H" to reset IC1.
IC1	MPD7564CS-113	Remote control reception microprocessor	

CIRCUIT DESCRIPTION

Key name	Description	Conditions of nonacceptance	Display
PLAY KEY  (◀▶)	1. When pressed singly, the play mode is engaged. ● Play stops at the tape end.	● During CCRS ● During AUTO BIAS operation ● Without cassette half	 Linear counter
	2. When pressed simultaneously with the REW key, the tape is rewound, then played. ● Concurrently with the pressure, the tape is rewound. ● Play starts at the tape head.		 Linear counter
STOP KEY  (▶▶) (◀◀)	1. When pressed, all operation stops. ● When pressed during CCRS, the CD player also stops.	● During CCRS ● During AUTO BIAS operation ● Without cassette half	Linear counter
	2. When pressed simultaneously with the FF key, the tape zero-stops in the FF direction. ● Concurrently with the pressure, the tape is fast forwarded and when the linear counter display reaches "0.00", stops.		 Linear counter
	3. When pressed simultaneously with the REW key, the tape zero-stops in the REW direction. ● Concurrently with the pressure, the tape is rewound and when the linear counter display reaches "0.00", stops.		 Linear counter
EJECT SW	1. When pressed, all operation stops and the cassette half is ejected. ● When pressed during CCRS, the CD player also stops.	● During play ● During recording	Linear counter The tape selector display goes out.
PAUSE KEY	1. When pressed during play, the play pause mode is engaged. When pressed during recording, the recording pause mode is engaged.	● During CCRS ● During AUTO BIAS operation ● Without cassette half	PLAY PAUSE  REC PAUSE 
	2. When pressed simultaneously with the REC key, the recording pause mode is engaged.	● During CCRS ● During AUTO BIAS operation ● Without cassette half ● Without recording tab	Linear counter
REC KEY	1. When pressed during stop or recording pause, the recording mode is entered.	● During CCRS ● During AUTO BIAS operation ● Without cassette half ● Without recording tab	REC  REC PAUSE  Lights  Flickers 
	2. When pressed simultaneously with the PAUSE key, the recording pause mode is engaged.		
	3. When pressed during recording, ARM (auto recording mute) is performed. ● The recording mute mode is engaged. 4 sec after, the recording pause mode is entered.		
TAPE/SOURCE KEY	1. Selection is made between tape and source. ● At power ON, the tape is engaged. ● For play or recording, the tape is automatically engaged. ● For recording pause, the source is automatically engaged.	● During CCRS ● During AUTO BIAS operation	For tape  For source 
COUNTER RESET KEY	1. The linear counter is reset to "0.00". ● While pressed, "0.00" is held. ● When pressed during zero-stop, the stop mode is engaged.		
AUTO BIAS KEY	1. The AUTO BIAS operation is performed. ● The tape is fast forwarded (FF) for 1 second. ● After that, up from the deepest bias step, 400 Hz and 10 kHz are recorded alternately (300 msec each) and level-checked repeatedly (300 msec each) up to the fullest range. In this process, when 400 Hz level < 10 kHz level, the operation hereat stops and the tape is rewound to the start point. ● When pressed when the auto bias setting is already made, the setting is canceled. (However, the setting cannot be canceled during recording.) ● For between tape and source, the tape is automatically selected.	● During CCRS ● During AUTO BIAS operation ● Except during stop ● Without cassette half ● Without recording inhibit tab	During setting  Flickers Setting already made  Lights
CCRS KEY	1. The deck enters the CCRS operation together with the CD player. ● For operation, refer to a separate paper.	● During CCRS operation ● During AUTO BIAS operation ● Without cassette half ● Except during stop ● Without recording inhibit tab	

CIRCUIT DESCRIPTION

Key name	Description	Conditions of nonacceptance	Display
TIMER PLAY SW	1. With this switch set to ON, the play mode is automatically engaged 4 seconds later from power ON.	● Without cassette half	
TIMER REC SW	1. With this switch set to ON, the recording mode is automatically engaged 4 seconds later from power ON.	● Without cassette half ● Without recording inhibit tab	
Bilateral easy operation ON/OFF switch	1. The bilateral easy operation or synchronous recording ON/OFF selection is made. ● For operation, refer to a separate section.		

Test Mode

1. Setting of test mode

Shorting the test pin (TP3 → TP4), turn the power ON.

2. Contents of test mode

- At power ON, the FL display is all lit.
- With a key ON or for timer play or timer recording, the FL display is canceled from all lighting.
- Each key is accepted after 1 second from power ON.
- The recording mode is accepted from any mode whatsoever.

- Any key is accepted irrespective of the half switch and the recording inhibit tab.

- The AUTO BIAS setting is performed in a shorter mode (1/3 the normal speed) in 16 steps at any case without LINE OUT muting.

3. Cancellation of test mode

The test mode is cancelled by pressing the PAUSE key.

CIRCUIT DESCRIPTION

About Bilateral Easy Operation ON/OFF Switch Function

The operation varies as follows depending upon the ON/OFF setting of the bilateral easy operation ON/OFF switch:

Combination	Switch status	XR (ON)	XS (OFF)
1. System Component/ Receiver		Connected to terminal TAPE 1. <ul style="list-style-type: none"> Easy operation is performed. Synchronous mode (PHONO, CD) is performed. During recording, the selector of the amplifier and the TAPE 2 monitor key are locked. 	Connected to terminal TAPE 2. <ul style="list-style-type: none"> Easy operation is not performed. Synchronous mode is not performed. During recording, the selector of the amplifier and the TAPE 2 monitor key are not locked.
2. KA-V7000 KA-V6000 KA-V4000		Synchronous mode (PHONO, CD) only is performed. (However, the input selector and the REC OUT selector should be the same in setting.)	<ul style="list-style-type: none"> Easy operation is not performed. Synchronous mode is not performed.
3. Component unit and KA-V5000		<ul style="list-style-type: none"> Easy operation is not performed. Synchronous mode is not performed. 	<ul style="list-style-type: none"> Easy operation is not performed. Synchronous mode is not performed.

* However, in any case, the synchronous mode is performed in recording after CCRS operation. (CD player only) In addition, an operation by the system remote control is accepted in any event. (Deck-B code)

EDIT CCRS Operation

Deck	CD player
1. Press the CCRS key. <ul style="list-style-type: none"> The recording pause mode is engaged automatically. (This operation is canceled unless a reply is given within 30 seconds from the CD player.) When the STOP or EJECT key is pressed, this operation is canceled. Any other key is not inhibited. 	<ul style="list-style-type: none"> Peak point sampling starts. In the time display, the CCRS portion lights. When the STOP or OPEN/CLOSE key is pressed, this operation is cancelled. Any other key is inhibited.
2. Seeing the level meter, adjust the REC level control.	
3. When the recording level is OKed, press the REC key. <ul style="list-style-type: none"> The recording mode is engaged. (The synchronous recording mode is engaged. When either side stops, the synchronous recording mode is canceled.) Any key is accepted. Upon the termination of recording the side A, the stop mode is engaged. 	<ul style="list-style-type: none"> Play is automatically made from the beginning of that tune. Any key is accepted. The time display returns to previous. Upon the termination of playing the file of the side A, the pause mode is engaged at the head of the file of the side B.
4. Side A → Side B	
5. Press the REC key.	
	6. Press the PLAY key.

CIRCUIT DESCRIPTION

Circuit Operation

DOLBY IC (CXA1330S)

Comparing the new DOLBY IC used in this unit with the conventional DOLBY IC...

1. Simplified I/O circuitry by virtue of fixed I/O gain
PB IN —30 dBs, REC OUT —6.0 dBs
REC IN —25 dBs, MONITOR OUT 0 dBs
(at DOLBY level, 0 dBs=0.755 V)
2. Smaller number of externally connected parts owing to great omission of capacitors within side chains
There only remain high-level and low-level DET rectification capacitors and spectrum skewing twin T filter.
3. Compatibility with two modes, passing and non-passing of line input through MPX filter
The DOLBY NR mode is controlled by voltage selection, basically as shown in Figure1.

The DOLBY input selection is as follows:

Through MPX filter ... MPX

Not through MPX filter ... REC

For playback input ... PB

This control is made by voltage selection, basically as shown in Figure 2.

This DOLBY IC is operable on either a single power or positive/negative dual power as shown below:

Power	IC	Pin16	Pin 15	Pin 17
Single power		Vcc	GND	Connected to GND through chemical capacitor
Positive/negative dual power		+Vcc	-Vcc	GND

Note: Pin 17, which is the input of the internal reference power, is subject to resistor-division between pins 16 and 15 into 1/2 Vcc (GND).

Figure 1. NR mode selection (on single power)

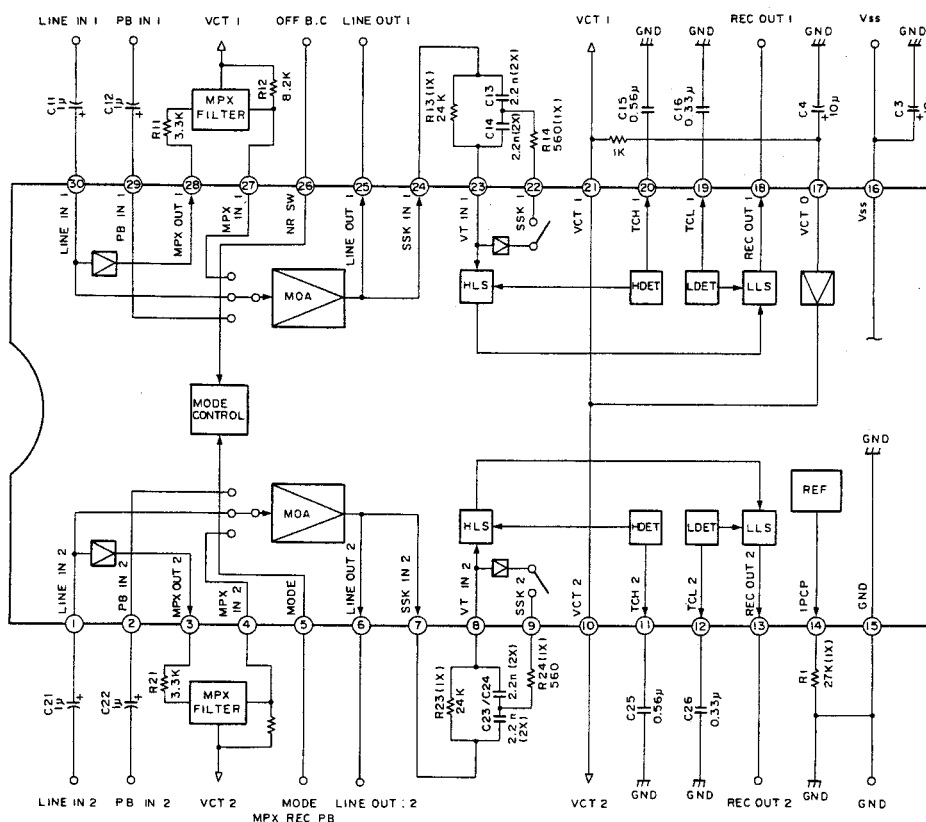

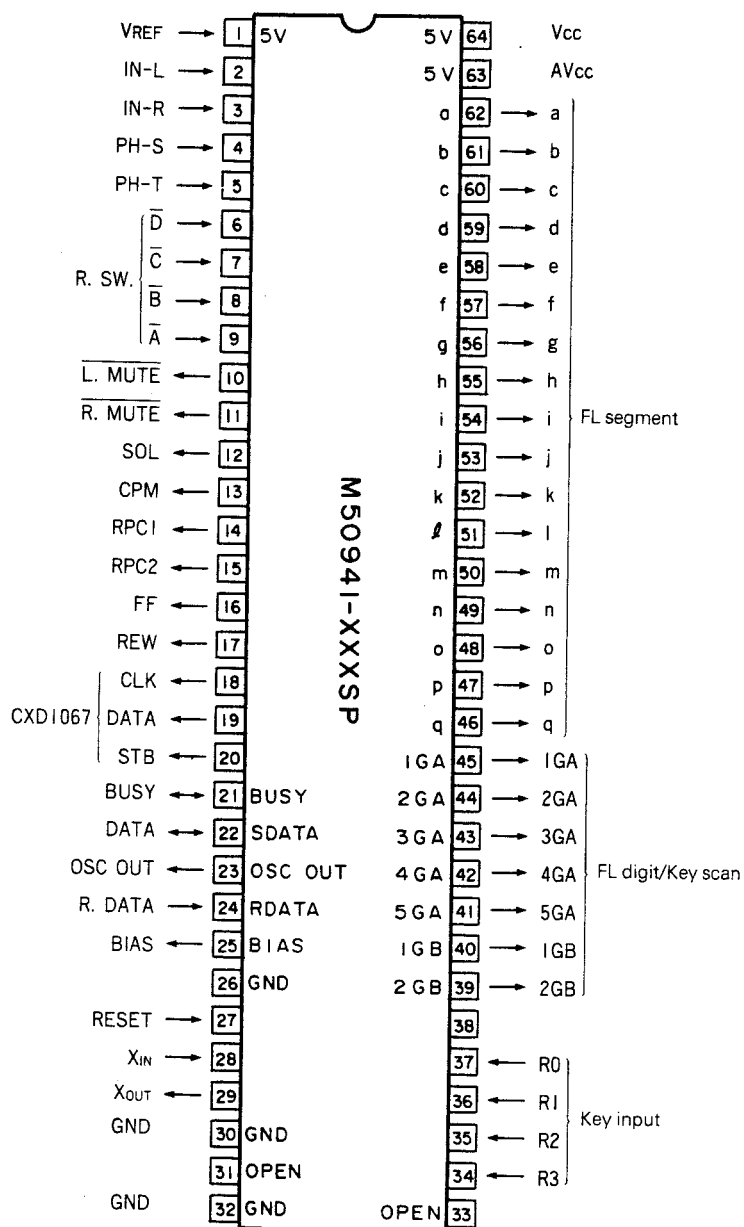

Figure 2. Mode selection (on single power)

18	DATA	I		Data input pin
19	CLK	I		Data clock input pin
20	VDD			Power supply pin (5 V)

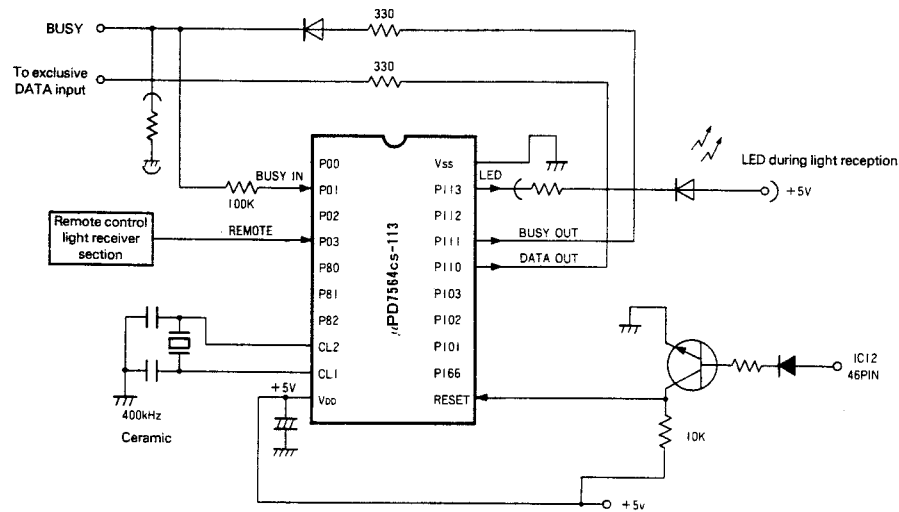

CIRCUIT DESCRIPTION

Microprocessor (μ PD7564CS-113)

1. Remote control reception

- (a) This receives the remote control custom code "B749" for a single cassette deck, converts that data code to a serial code (with the same format as for system control), which is in turn output. (However, the system control is given priority. For this reason, when the bus is busy, no remote control signal is received.)

- (b) LED flickering during remote control code reception
The LED flickers at cycles of 64 msec during remote control code reception.
- (c) Remote control key OFF detection
Upon termination of remote control code reception, the code "27" is output as the key OFF signal.

MECHANISM DESCRIPTION

STOP — FF or REW

(Press the FF or REW key.)

- (1) The reel motor (70) starts to rotate in the direction of arrow ①.
- (2) At the same time, the solenoid (71) works to operate the brake ass'y (7, 8) in the direction of arrow ②.
- (3) As the idler gear (14) becomes free for a small time, the takeup reel (FF) and the supply reel (REW) are put into engagement.
- (4) Either reel stand (6) starts to rotate to provide the FF or REW operation ④.

MECHANISM DESCRIPTION

STOP → PLAY/REC

(Press the PLAY/REC button.)

- (1) The reel motor (70) starts to rotate in the direction of arrow ①.
- (2) Due to the brake assy (7, 8), the idler gear (14) continues to rotate at the central position.
- (3) The rotation of the reel motor (70) is transmitted to the cam gear (13) through the idler gear (14) and assist gear (12).
- (4) By the cam of the cam gear (13), the boss (A) on the head base is pushed up.
- (5) At this time, as the solenoid (71) works for a small time ... ⑤, the brake assy (7, 8) moves in the direction of arrow ⑥ and the idler gear (14) thus engages with the takeup reel (6) ... ⑦, so that the tape is wound to enter the PLAY/REC operation ... ⑧.

PLAY/REC → STOP

(Press the STOP key.)

- (1) The reel motor (70) starts to rotate in the direction of arrow ①, and the idler gear (14) is thereby rotated and moved in the direction of arrow ② to the central position.
- (2) The cam gear (13) starts to rotate to lower the head base (2).
- (3) At this time, as the solenoid (71) works ... ④, the idler gear (14) is disengaged from the brake assy (7, 8) and is moved in the direction of arrow ⑤ so that the supply reel (6) is slightly rotated ⑥ to rewind the tape.
- (4) Again the reel motor (70) rotates reversely ⑦ to return the idler gear (14) to the central position, after which it stops.

ADJUSTMENT

No.	ITEM	INPUT SETTINGS	OUTPUT SETTINGS	CASSETTE TAPE DECK SETTINGS	ALIGNMENT POINTS	ALIGN FOR	FIG.
Unless otherwise specified; each switch should be set as follows: TAPE: NORMAL, DOLBY,: OFF, INPUT: LINE I. Cassette mechanism section (REC/PB head adjustment)							0 dBs = 0.775 V
[1]	Demagnetization and cleaning	—	—	Power OFF, demagnetization, cleaning play	REC/PB head, erase head, capstan, pinch roller	Demagnetize the REC/PB head by head eraser. Clean the REC/PB head, erase head, capstan and pinch roller with a cotton swab immersed in alcohol.	
[2]	REC/PB head azimuth	SCC-1727, MTT-114, TCC-153 10 kHz, -10 dB	(B)	PLAY	Azimuth adjustment screw	In a setting where the output is maximized, adjust the azimuth adjustment screw so that the Lissajous figure appearing on the oscilloscope screen comes near to a line slanted 45°. Note: The head should be installed in such a manner that it approaches the tape face.	(a)
[3]	Tape speed	MTT-111, SCC-1727 TCC-100 3 kHz, -4 dB	(B)	PLAY	Semi-fixed resistor in DC motor assembly	Adjust so that frequency is 3 kHz at the center of the tape.	(b)
II. PC board adjustment							
<1>	Playback level	MTT-150, TCC-130 400 Hz	(B)	PLAY	VR1(L) VR2(R) (X26-124)	Adjust so that LINE OUT is -1.0 dBs.	
		MTT-256, SCC-1727 315 Hz				Adjust so that LINE OUT is -4.0 dBs.	
		MTT-256U, TCC-160 315 Hz				Adjust so that LINE OUT is 0 dBs.	
<2>	Bias current	(A) 1 kHz, -30 dBs 10 kHz, -30 dBs	(B)	Adjust the REC VR (LEVEL, BALANCE) so that the REC monitor output is -24 dBs at 1 kHz, and record and playback 1 kHz and 10 kHz alternately.	VR7(L) VR8(R) (X26-124)	Record 1 kHz and 10 kHz alternately, and adjust each bias current adjustment VR so that the 10 kHz play back level is +0.5 dBs against 1 kHz.	
<3>	Recording level	(A) 1 kHz, -30 dBs	(B)	With the situation in above item <2> being kept as it is, record and play back 1 kHz.	VR5(L) VR6(R) (X26-124)	Adjust so that the playback output level is -24 dBs.	
<4>	FL meter 0 dB	(A) 1 kHz, -10 dBs	—	Adjust the REC VR (LEVEL, BALANCE) so that the REC PAUSE monitor output is -4 dBs at 1 kHz.	VR9(L) VR10(R) (X26-124)	Adjust so that "0 dB" lights.	
Note: On item <1> in "II. PC board adjustment"							
Although 3 kinds of tapes are set forth for the playback level adjustment, the use of one tape suffices for adjustment. Here is meant no necessity for the use of all these 3 kinds of tapes. Other than the above mentioned tapes, when a test tape equal in magnetic flux and frequency is available, the adjustment is feasible with this test tape by making the playback output suited to the specified output level of this tape in agreement with the adjustment method.							

SYSTEM CONNECTIONS

REGLAGE

N°	ITEM	REGLAGE DE L'ENTREE	REGLAGE DE LA SORTIE	REGLAGE DU MAGNETOPHONE A CASSETTE	POINTS DE L'ALIGNEMENT	ALIGNER POUR	FIG.
Chaque commutateur doit être réglé comme suit, à moins d'indication contraire. 0 dBs = 0,775 V TAPE: NORMAL, DOLBY: OFF, INPUT: LINE							
I. Section de mécanisme de la cassette (ajustement de la tête d'enregistrement/lecture):							
[1]	Démagnétisation et nettoyage	—	—	Alimentation coupée, démagnétisation, nettoyage, lecture	Tête d'enregistrement/lecture, tête d'effacement, cabestan, galet presseur	Démagnétiser la tête d'enregistrement/lecture avec l'effaceur de tête. Nettoyer la tête d'enregistrement/lecture, la tête d'effacement, le cabestan et le galet presseur avec un coton-tige trempé dans de l'alcool.	
[2]	Azimut de la tête d'enregistrement/lecture	SCC-1727, MTT-114, TCC-153 10 kHz, -10 dB	(B)	PLAY	Vis d'ajustement de l'azimut	Au réglage où la sortie est maximisée, ajuster la vis de réglage de l'azimut pour que la figure de Lissajous sur l'écran de l'oscilloscope soit proche d'une ligne inclinée sur 45°. Remarque: La tête doit être installée de manière à ce qu'elle s'approche de la face de la bande.	(a)
[3]	Vitesse de la bande	SCC-1727, MTT-111, TCC-100 3 kHz, -4 dB	(B)	PLAY	Résistance semi-fixe dans l'ensemble du moteur CC.	Ajuster pour que la fréquence soit, 3 kHz au centre de la bande.	(b)
II. Ajustement de la plaquette de circuits imprimés							
<1>	Niveau de lecture	MTT-150, TCC-130 400 Hz	(B)	PLAY	VR1(L) VR2 (R) (X26-124)	Ajuster pour que LINE OUT soit -1,0 dBs.	
		MTT-256, SCC-1727 315 Hz				Ajuster pour que LINE OUT soit -4,0 dBs.	
		MTT-256U, TCC-160 315 Hz				Ajuster pour que LINE OUT soit 0 dBs.	
<2>	Courant de polarisation	(A) 1 kHz, -30 dBs 10 kHz, -30 dBs	(B)	Ajuster la VR REC (LEVEL, BALANCE) pour que la sortie de contrôle REC soit -24 dBs à 1 kHz et l'enregistrement et la lecture 1 kHz et 10 kHz alternativement.	VR7(L) VR8(R) (X26-124)	Enregistrer 1 kHz et 10 kHz alternativement et ajuster chaque VR d'ajustement de courant de polarisation pour que le niveau de lecture 10 kHz soit +0,5 dBs contre 1.	
<3>	Niveau d'enregistrement	(A) 1 kHz, -30 dBs	(B)	La situation en <2> maintenue, enregistrer et lire 1 kHz.	VR5(L) VR6(R) (X26-124)	Ajuster pour que le niveau de sortie de lecture soit -24 dBs.	
<4>	Compteur fluorescent 0 dB	(A) 1 kHz, -10 dBs	—	Ajuster la VR REC (LEVEL, BALANCE) pour que la sortie de contrôle REC PAUSE soit -4 dBs à 1 kHz.	VR9(L) VR10(R) (X26-124)	Ajuster pour que "0 dB" s'allume.	
Remarque: Sur le paragraphe <1> de II. Ajustement de la plaque de circuits imprimés.							
Bien que 3 sortes de bandes soient employées pour l'ajustement du niveau de lecture, l'utilisation d'une bande suffit pour l'ajustement. En plus des bandes citées ci-dessus, quand une bande test de flux magnétique et de fréquence égaux est disponible, l'ajustement est possible en réglant la sortie de lecture sur le niveau de sortie spécifique à cette bande, selon la méthode d'ajustement.

		MTT-256, SCC-1727 315 Hz				So einstellen, daß LINE OUT -4,0 dBs beträgt.	
		MTT-256U, TCC-160 315 Hz				So einstellen, daß LINE OUT 0 dBs beträgt.	
<2>	Vormagnetisierungsstrom	(A) 1 kHz, -30 dBs 10 kHz, -30 dBs	(B)	Den REC-Regelwiderstand (LEVEL, BALANCE) so einstellen, daß der REC-Überwachungsausgang -24 dBs bei 1 kHz beträgt, und 1 kHz und 10 kHz abwechselnd aufnehmen und wiedergeben.	VR7(L) VR8(R) (X26-124)	1 kHz und 10 kHz abwechselnd aufnehmen und jeden Vormagnetisierungsstrom-Einstellungs-Regelwiderstand so einstellen, daß der 10-kHz-Wiedergabepegel +0,5 dB gegen 1 kHz beträgt.	
<3>	Aufnahmepegel	(A) 1 kHz, -30 dBs	(B)	Unter Beibehaltung der Situation im obigen Punkt <2> 1 kHz aufnehmen und wiedergeben.	VR5(L) VR6(R) (X26-124)	So einstellen, daß der Wiedergabe-Ausgangspegel -24 dBs beträgt.	
<4>	FL-Meter 0 dB	(A) 1 kHz, -10 dBs	—	Den REC-Regelwiderstand (LEVEL, BALANCE) so einstellen, daß der REC PAUSE-Überwachungsausgang -4 dBs bei 1 kHz beträgt.	VR9(L) VR10(R) (X26-124)	So einstellen, daß "0 dB" leuchtet.	
Hinweis: Zu Punkt <1> in "II. Platinen-Einstellung"							
Obwohl 3 Arten von Bändern für die Wiedergabepegel-Einstellung vorgegeben sind, reicht die Verwendung eines Bandes für die Einstellung aus. Das bedeutet, daß nicht alle 3 Arten Bänder verwendet werden brauchen. Wenn ein anderes Testband als die oben angeführten Bänder mit gleichen magnetischen Fluß und gleicher Frequenz verfügbar ist, kann die Einstellung mit diesem Testband durchgeführt werden, indem der Wiedergabe-Ausgang für den spezifizierten Ausgangspegel dieses Bandes in Übereinstimmung mit der Einstellmethode passend gemacht wird.							

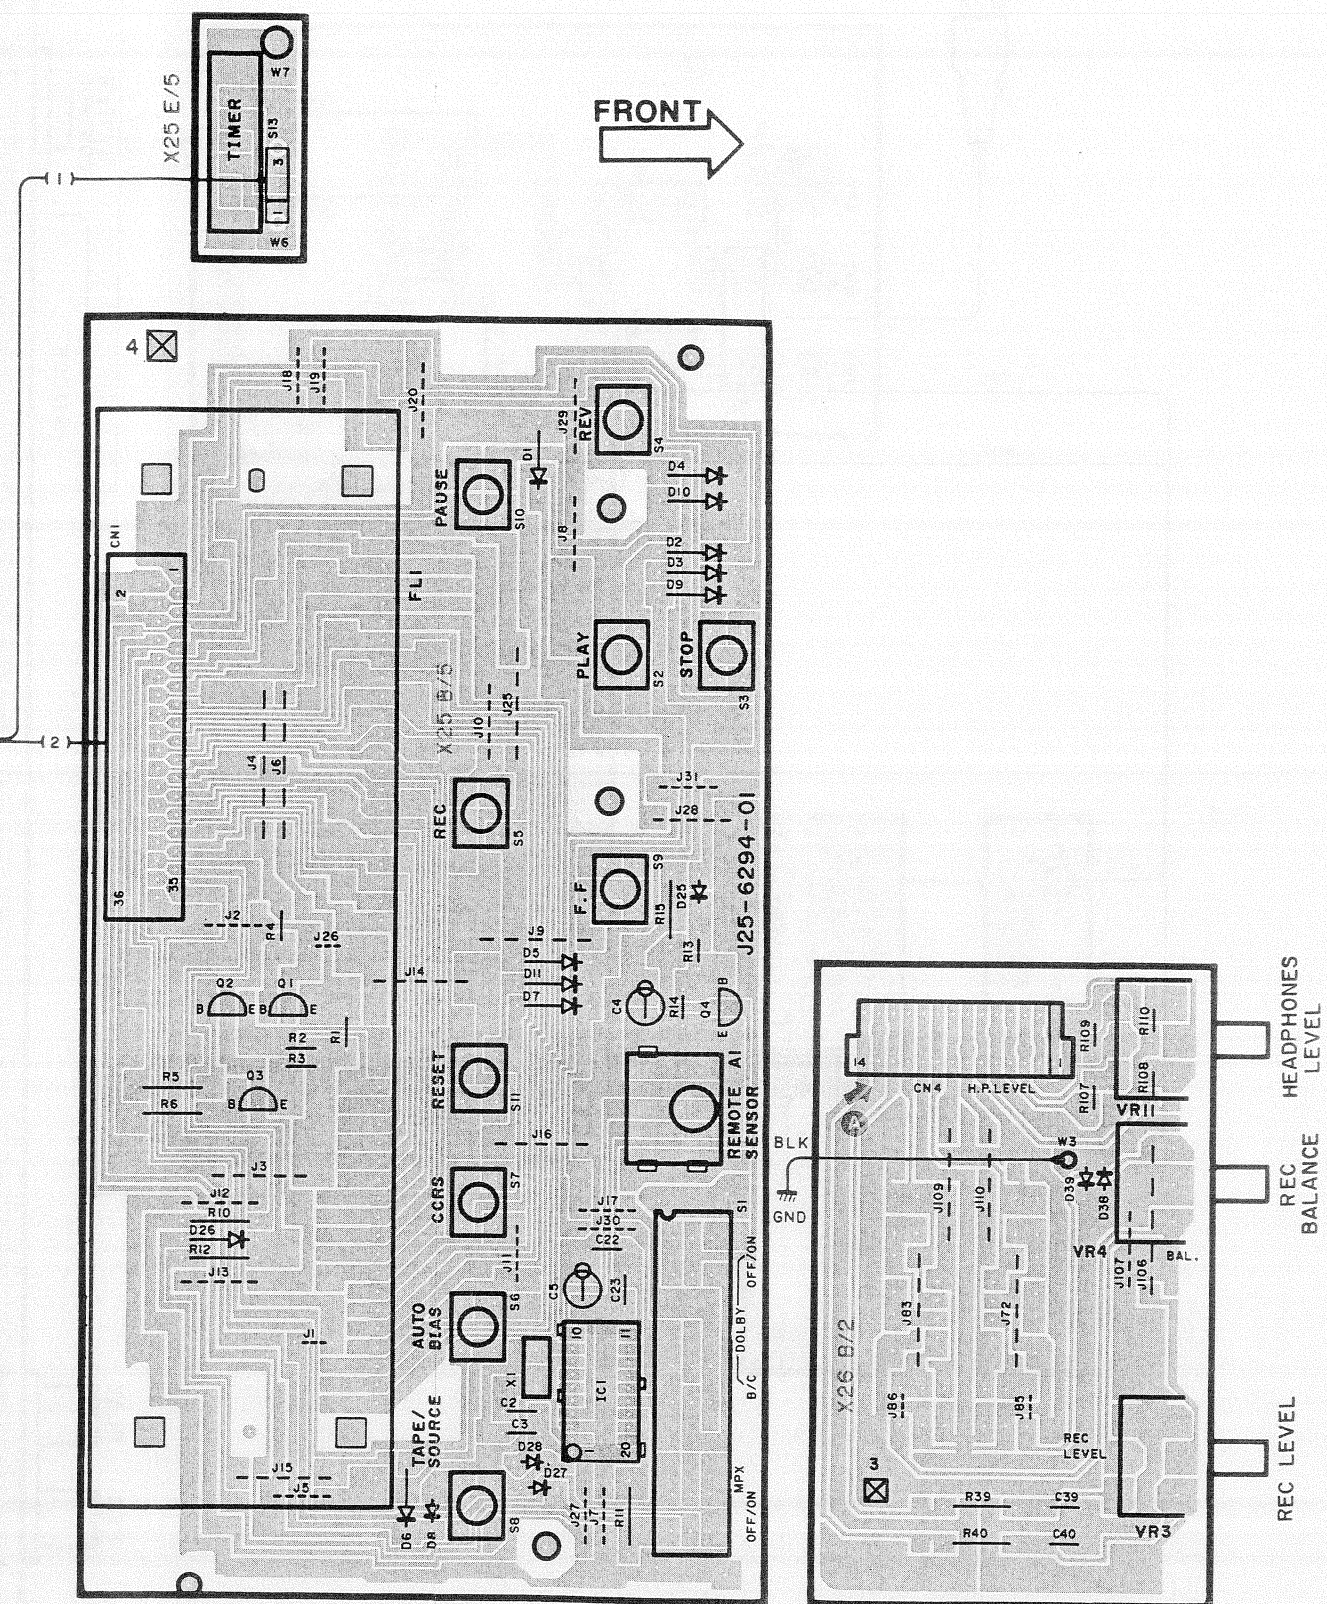

PC BOARD (Component Side View)

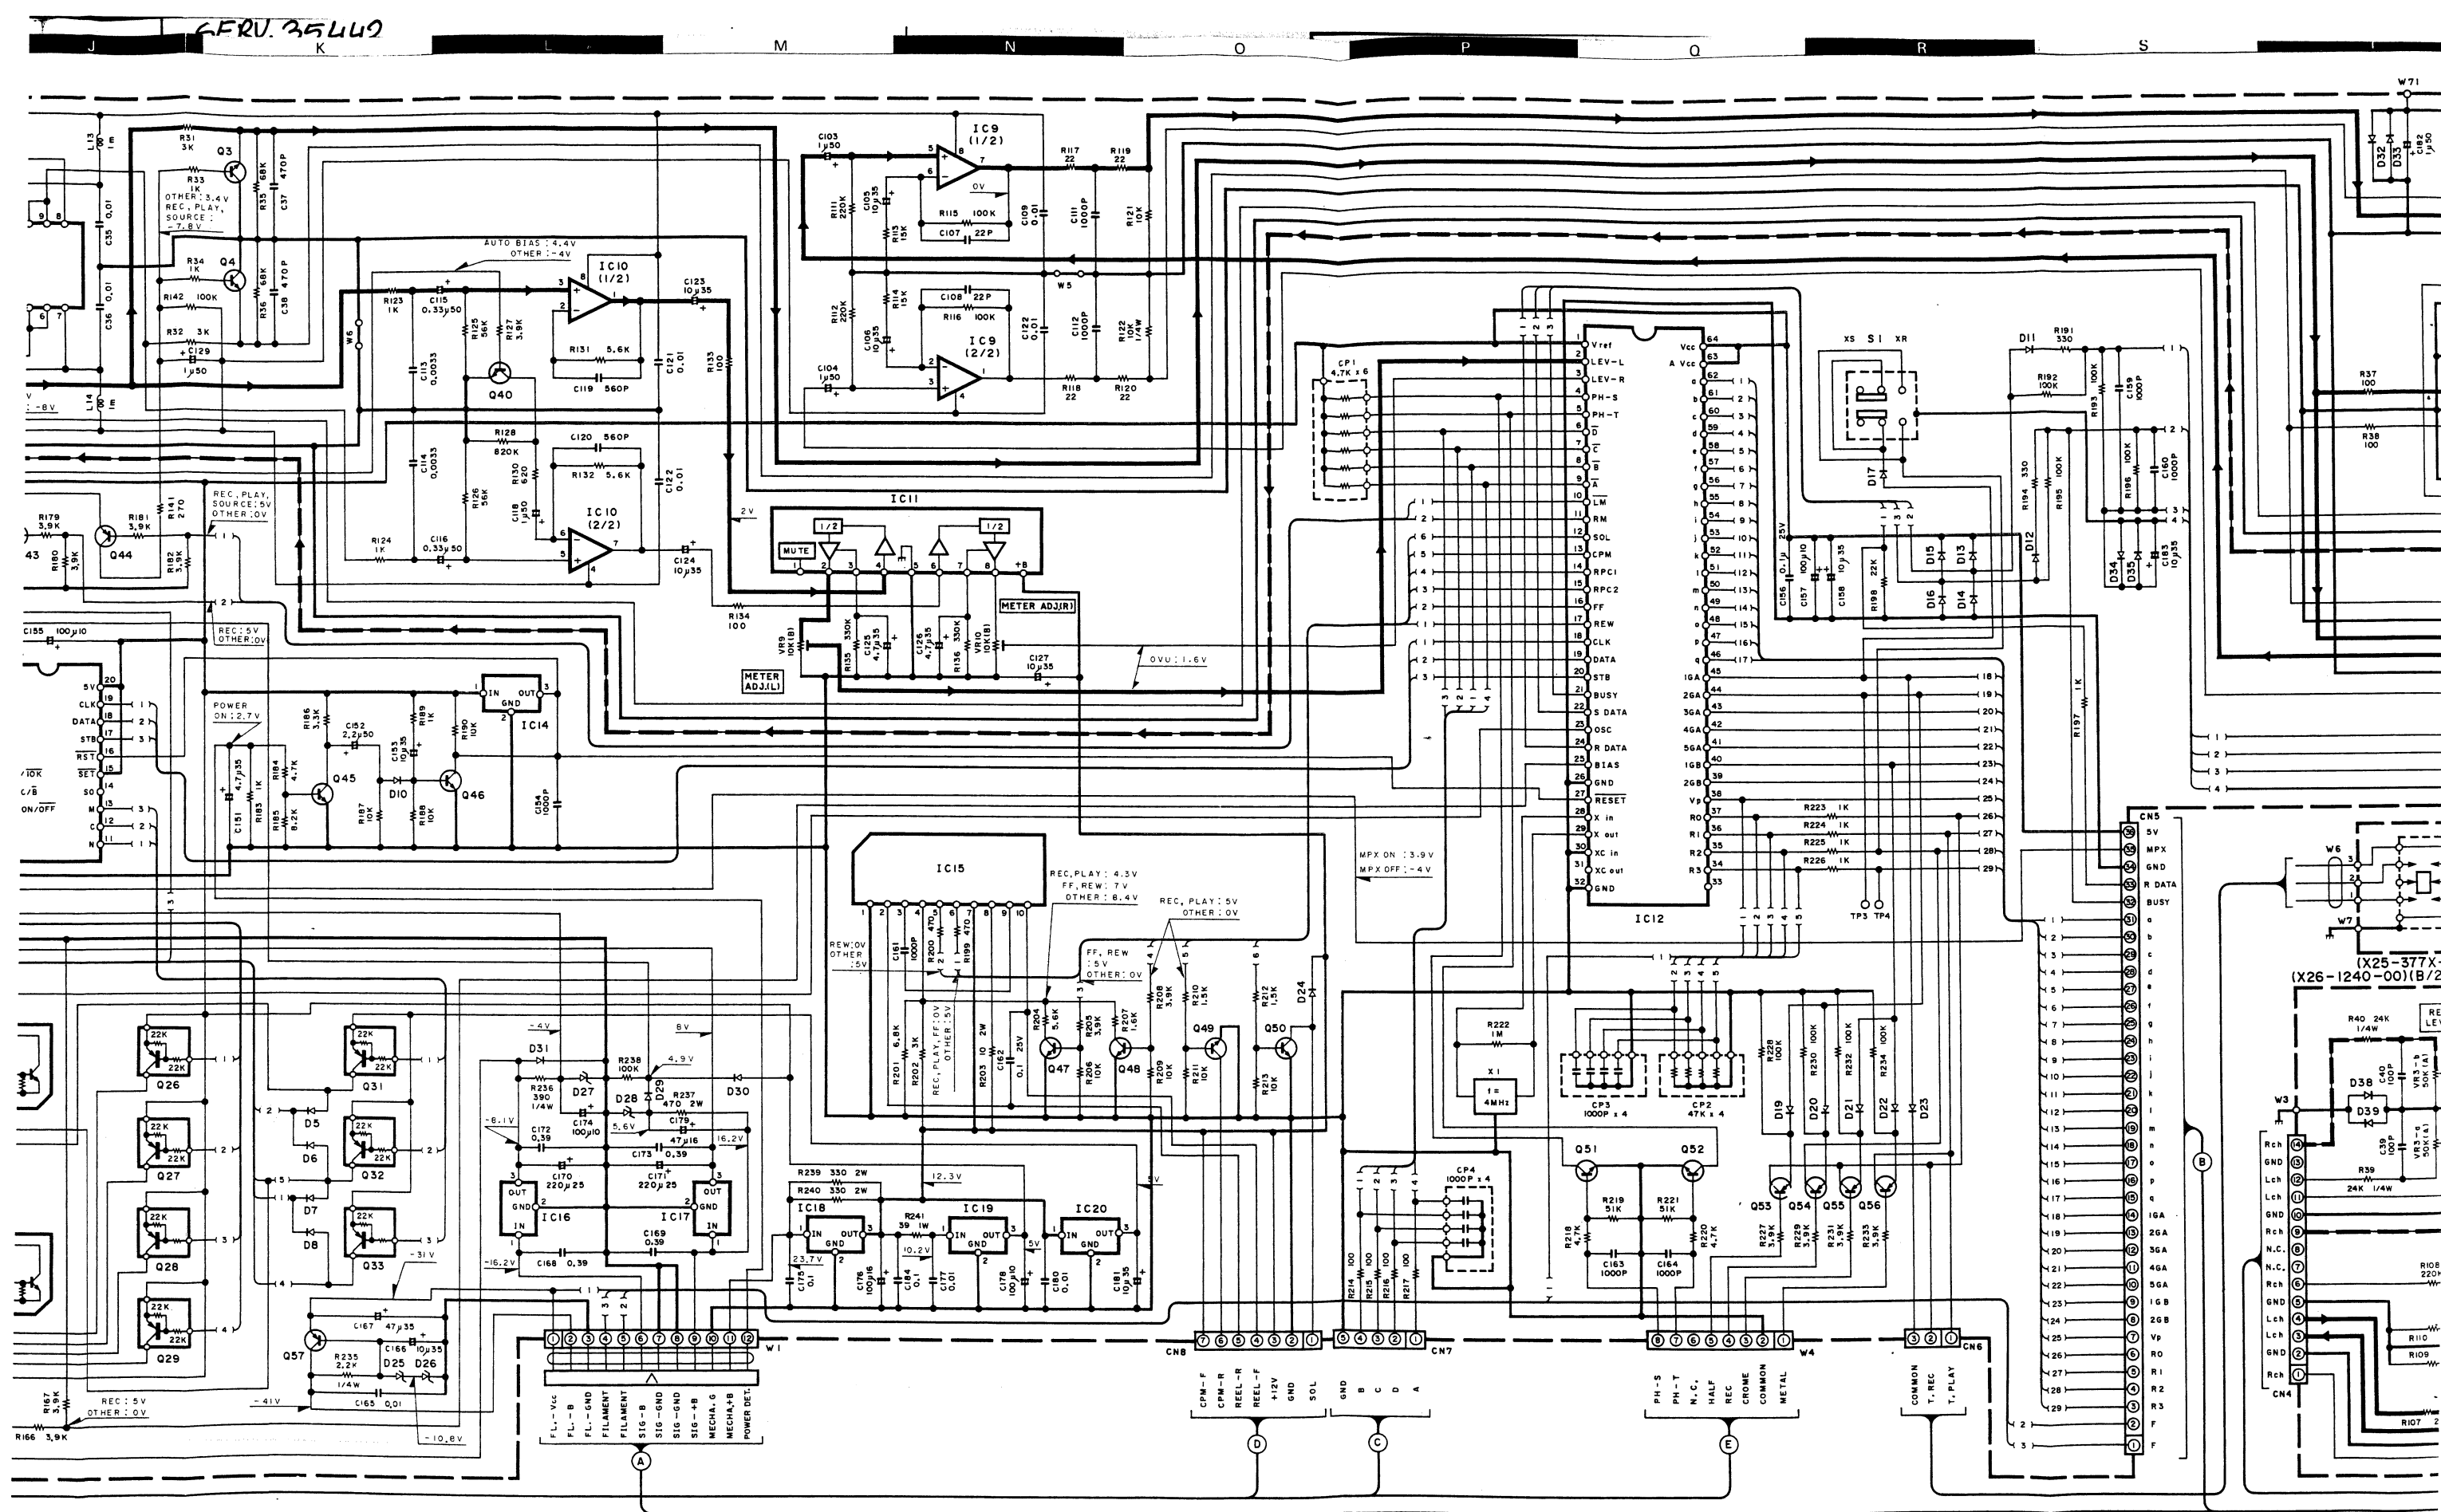

32

This is a detailed electronic circuit diagram for a portable cassette recorder. The circuit is organized into several functional blocks:

- Input and Initial Stages:** The top left section includes the PB HEAD and REC HEAD inputs, leading into IC1 (1/2) and IC1 (2/2) op-amp stages. These are followed by various biasing and level adjustment stages (BIAS TRAP, REC LEVEL ADJ) involving transistors Q1, Q2, Q3, Q4, Q5, Q6, Q7, Q8, Q9, and Q10.
- Signal Processing:** The central part of the diagram features IC2, IC3, IC4, IC5 (1/2), and IC5 (2/2). These ICs handle the main signal processing, including amplification and level control. Transistors Q11 through Q18 are used in these stages.
- Control and Protection:** IC6 is a dedicated control IC containing a PRE DRIVER, COMPARATOR, THERMAL DETECTING PROTECTION CIRCUIT, and STABILIZING POWER SOURCE. It is interfaced with IC7 and IC8, which manage the tape transport control logic. Transistors Q19 through Q29 are part of these control stages.
- Power and Biasing:** The bottom right section shows the power supply and biasing network, including IC9, IC10, and IC11. It provides the necessary voltages for the tape heads and the recorder's internal components.
- Output and Monitoring:** The final output stage involves IC12 and IC13, which drive the speakers and provide monitoring signals. Transistors Q30 through Q39 are used in these output and monitoring stages.

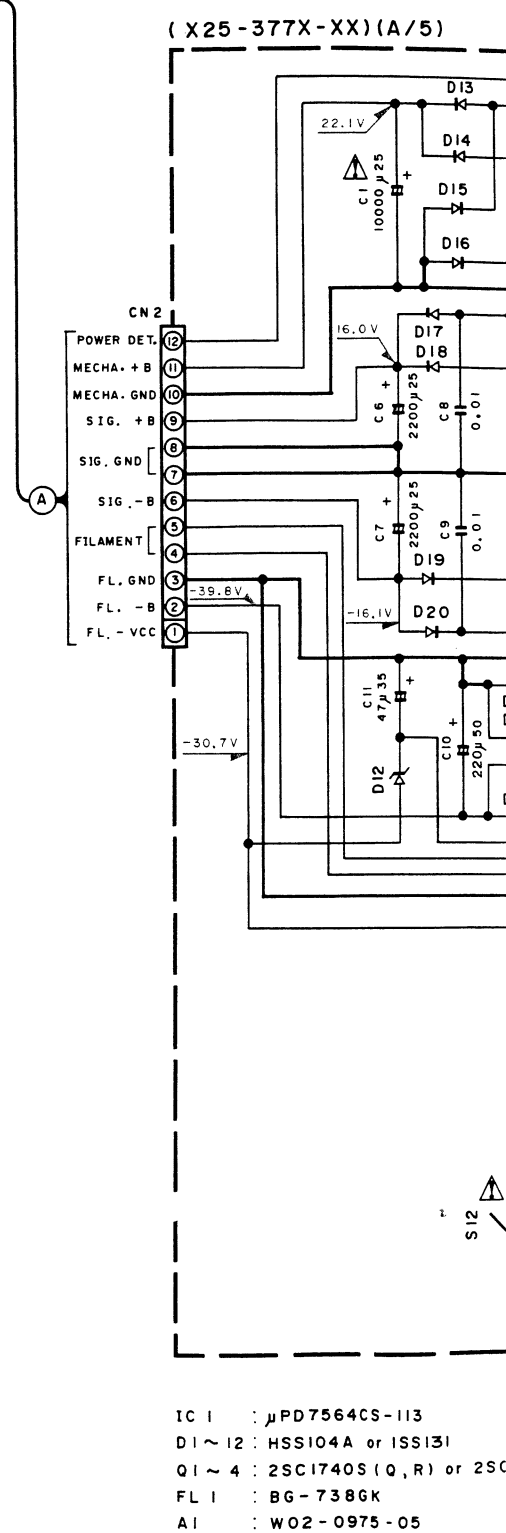

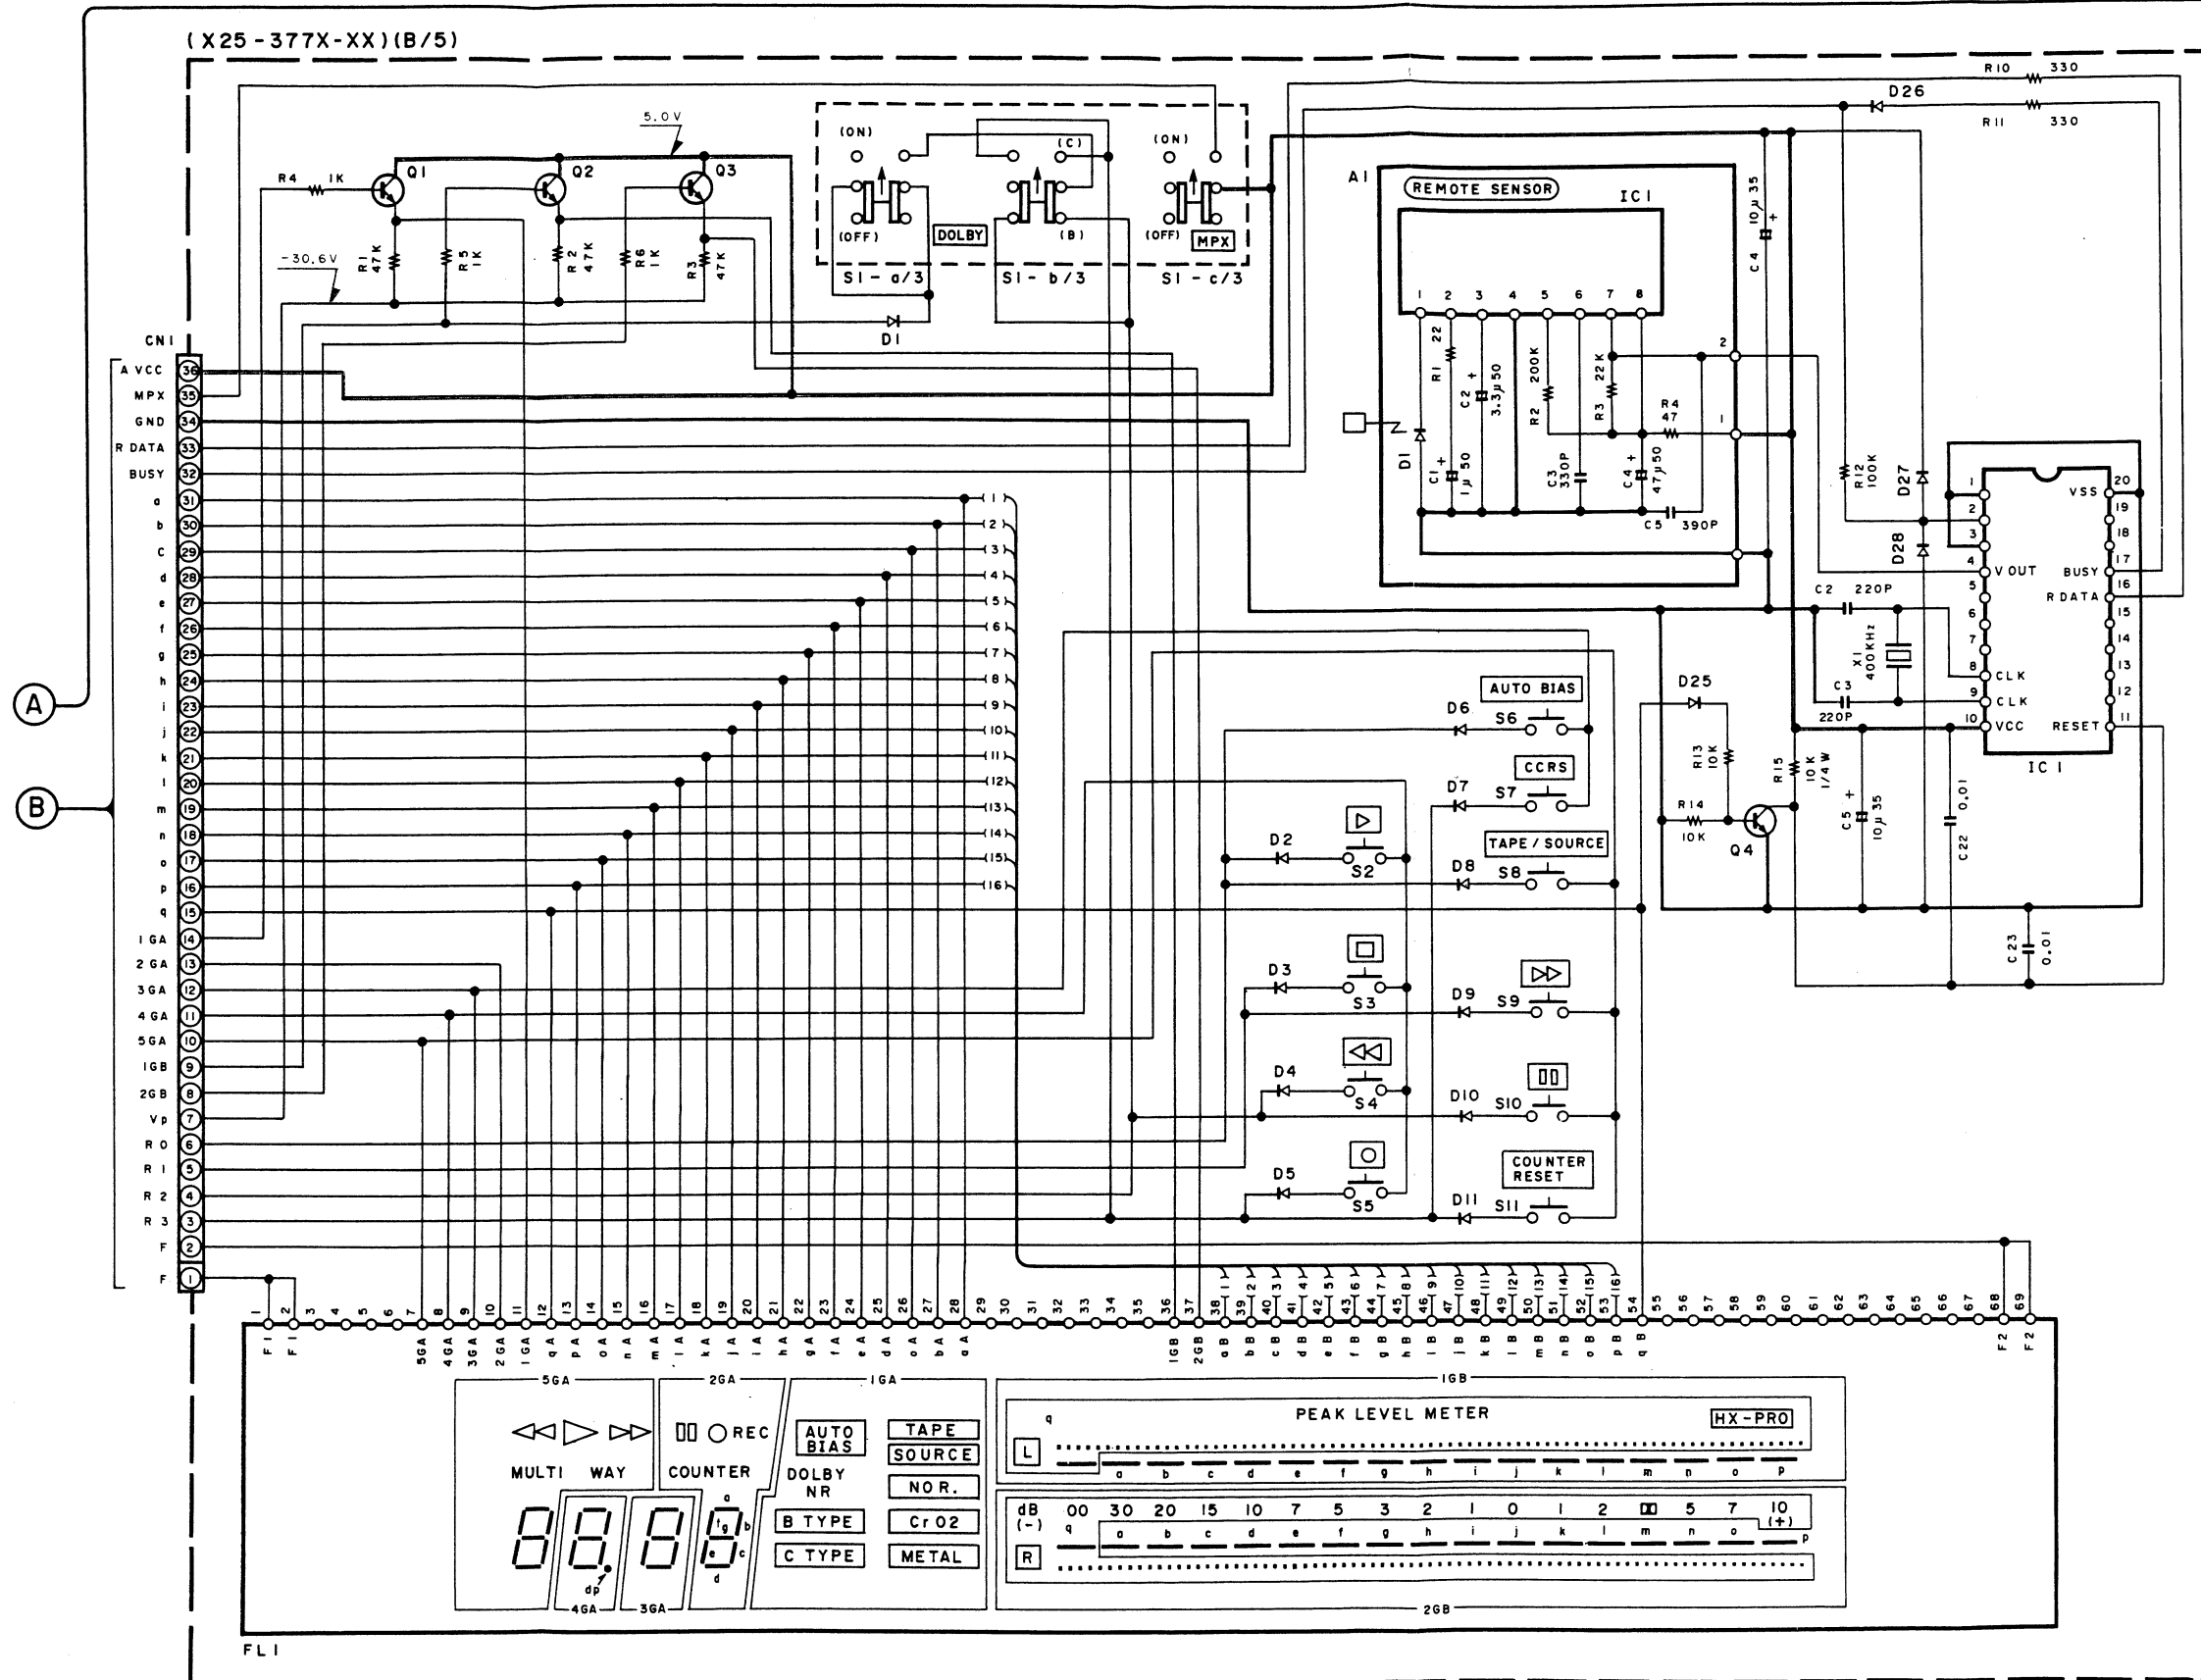

The diagram is densely packed with components, with numerous resistors (R1-R100) and capacitors (C1-C100) used for precise signal conditioning and timing. Various test points (TPI, TP2) and adjustment points (REC LEVEL ADJ, BIAS ADJ) are indicated for servicing and calibration.

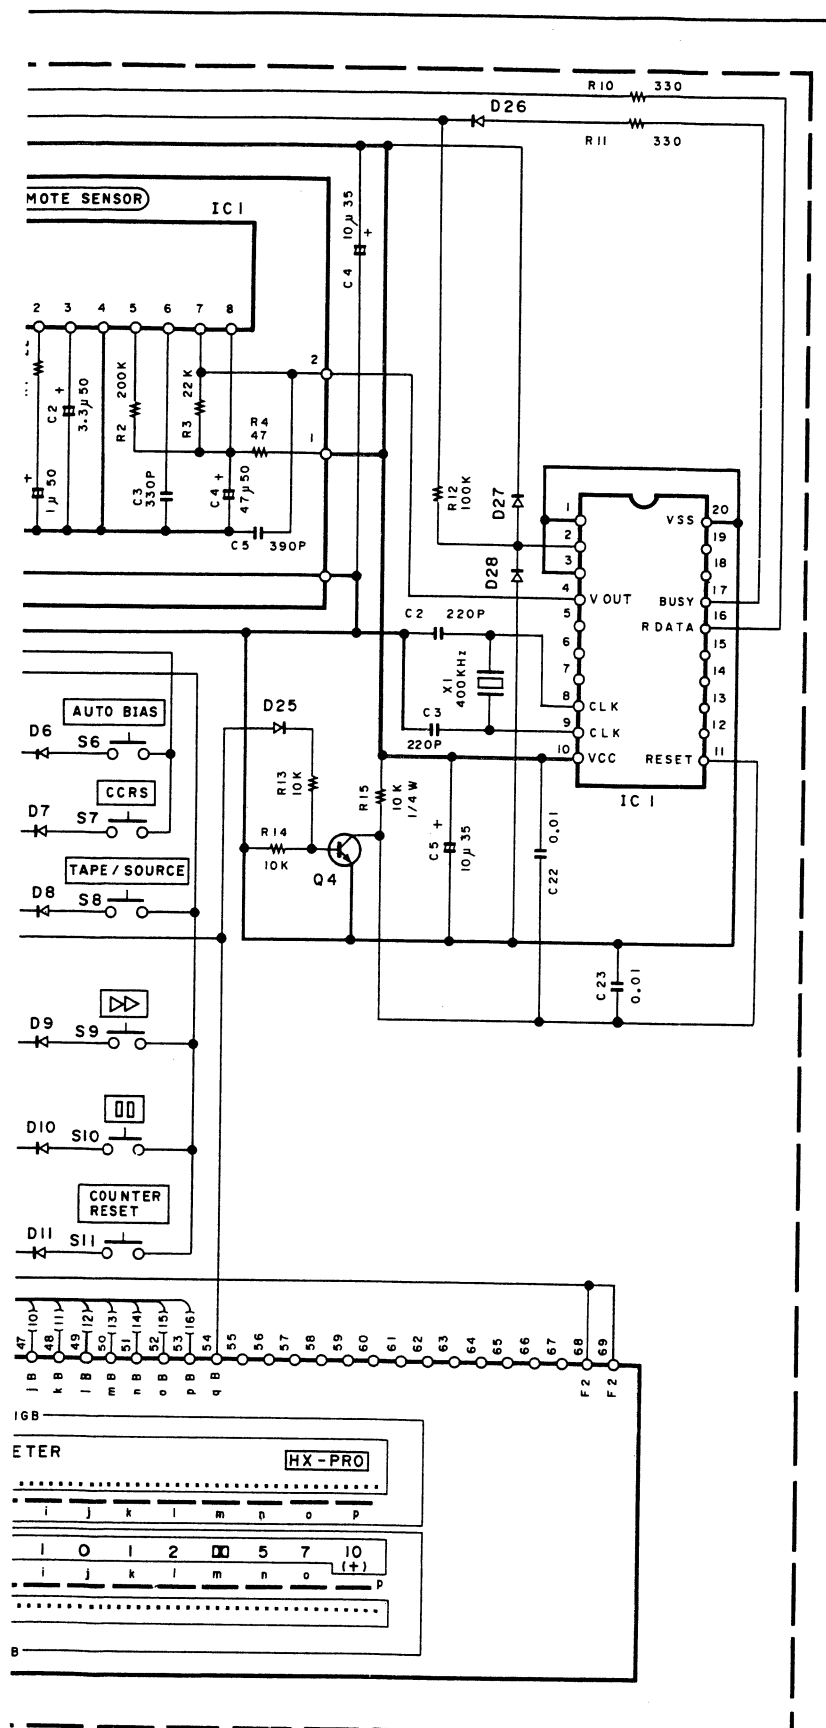

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

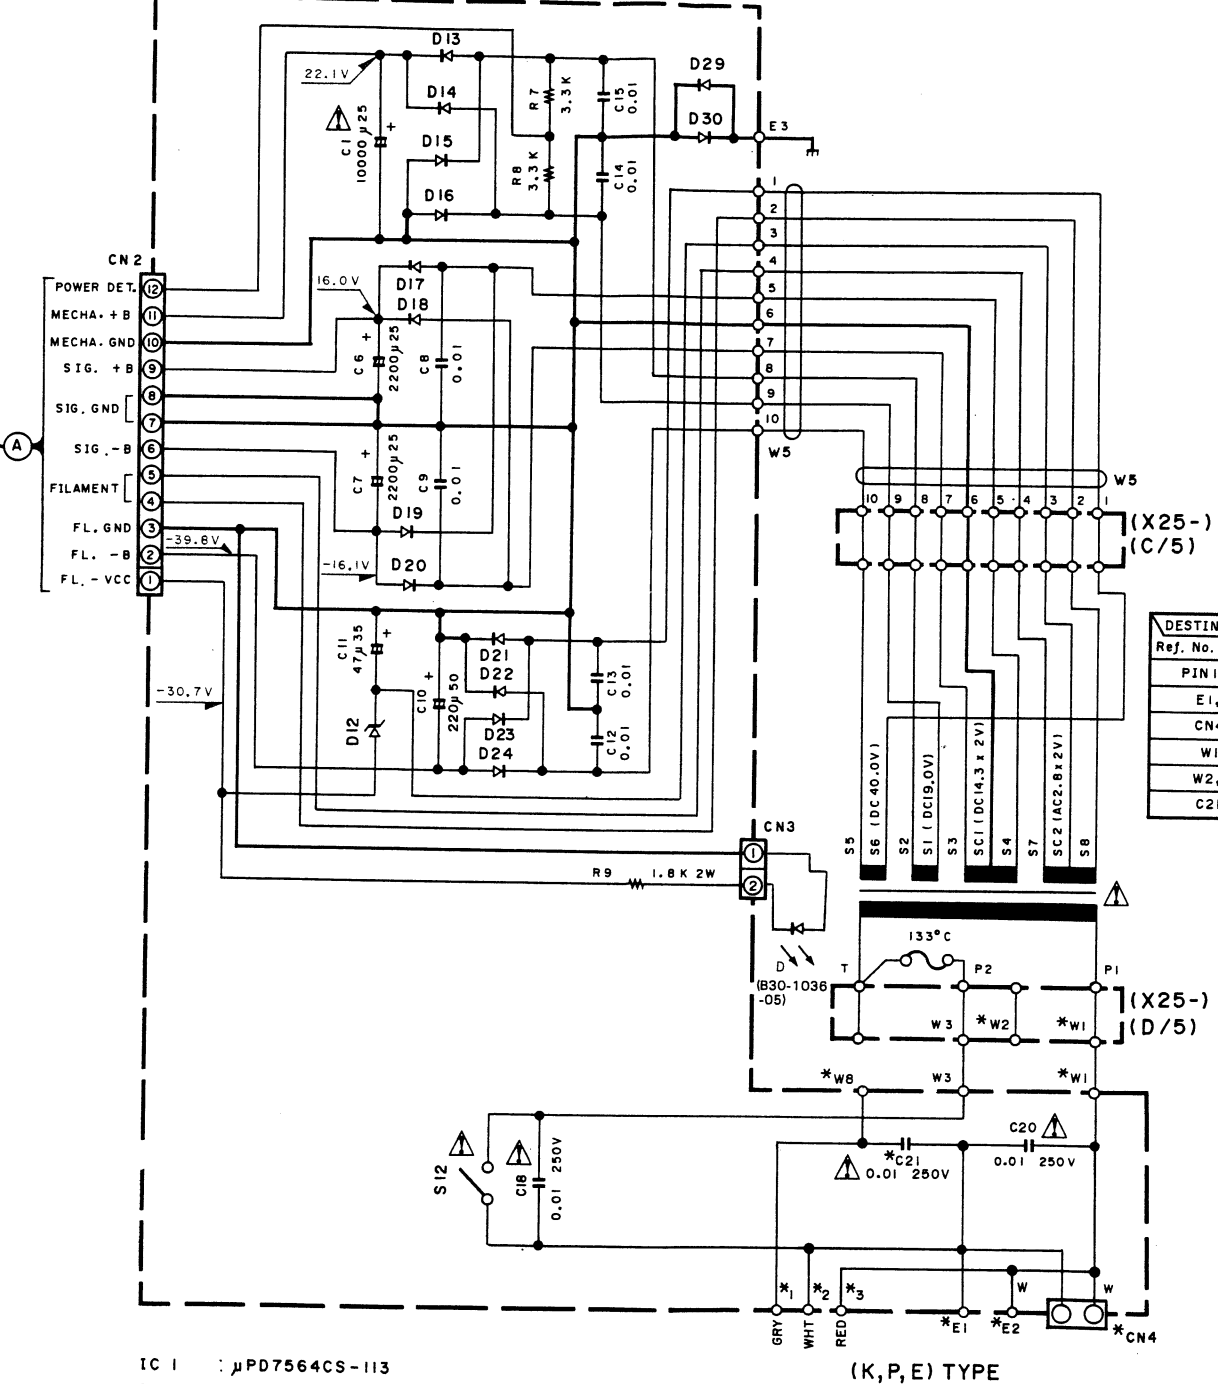

DC voltages are as measured with a high impedance voltmeter with a cassette loaded at playback mode. Values may vary slightly due to variations between individual instruments or/and units. Bias circuit DC voltages are as measured while in the record mode.

SPECIFICATIONS

Track system	4-track, 2-channel stereo
Recording system	AC bias system (Bias frequency 210 kHz)
Heads	Record/play (Hard permalloy combination head) \times 1
	Erase (Double-gap ferrite head) \times 1
Motors	Capstan drive motor \times 1
	Reel drive motor \times 1
Wow and flutter	0.05% (W.R.M.S.) \pm 0.16% (DIN)
Fast winding time	Approx. 90 seconds (C-60)
Frequency response	
Normal tape:	20 to 17,000 Hz, \pm 3 dB
Chrome tape:	20 to 18,000 Hz, \pm 3 dB
Metal tape:	20 to 19,000 Hz, \pm 3 dB

Signal-to-noise ratio	73 dB (Dolby C NR ON) (Metal tape)
	66 dB (Dolby B NR ON) (Metal tape)
	58 dB (Dolby NR OFF) (Metal tape)
Distortion	0.8% (at 1 kHz, 0 dB, 3rd H.D. with metal tape)
Inputs	Line: 77.5 mV/50 k Ω
Outputs	Line: 490 mV/3 k Ω
	Headphones: 0.85 mW/8 Ω

General

Power consumption	27 W
Dimensions	W: 440 mm (17-5/16")
	H: 127 mm (5")
	D: 321 mm (12-5/8")
Weight (Net)	5.2 kg (11.5 lb)

Kenwood follows a policy of continuous advancements in development.

For this reason specifications may be changed without notice.

DOLBY and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation. Noise reduction circuit made under license from Dolby Laboratories Licensing Corporation.

Kenwood poursuit une politique de progrès constants en ce qui concerne le développement.

Pour cette raison, les spécifications sont sujettes à modifications sans préavis.

La marque DOLBY et le double "D" sont des marques déposées des Dolby Laboratories.

Le système de réduction du bruit de fond est fabriqué sous licence des Dolby Laboratories.

Kenwood strebt ständige Verbesserungen in der Entwicklung an.

Daher bleiben Änderungen der technischen Daten jederzeit vorbehalten.

DOLBY und Doppel-D-Symbol sind eingetragene Warenzeichen der Dolby Laboratories.

Dolby-Rauschunterdrückung mit Lizenz der Dolby Laboratories gefertigt.

Note:

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on the U.S.A. (K) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.
